Introduction

1. The List of Wastes (LOW) Regulations 2005 transpose the European Waste Catalogue (EWC) into domestic legislation, and provide codes for all hazardous and non-hazardous wastes. We have issued this guidance to promote the consistent use of the codes in the list to help protect health and safety, the environment and to improve reporting. We aim to help anyone producing, carrying or managing waste in England and Wales to code it correctly using the codes from the list. This guidance also includes a waste thesaurus - a list of commonly used waste descriptions and their related codes.
2. We intend to use LOW codes for wastes that facilities can accept under the terms of their waste management licences or PPC permits. This is already being applied to newly issued permissions and LOW codes will gradually replace the waste classifications used on existing licences.

The Duty of Care and the List of Wastes

3. The use of List of Wastes Regulations codes is a legal requirement of the Duty of Care (DoC)¹ legislation in England and Wales.
4. The DoC requires that a waste holder (producer, carrier or disposer) takes all reasonable steps to ensure there is no unauthorised deposit, treatment, keeping or disposal of controlled wastes, that it does not escape from their control, and is only transferred to an authorised person.
5. It also requires waste to be described in a way that permits its safe handling and management and that any transfer of waste is accompanied by a written description of the waste including a LOW code. In addition to the code and its associated description, any waste should also be described in a way that identifies any properties relevant to its handling.
6. Taken together, this information must be sufficient to enable subsequent holders to manage the waste without threat to the environment or human health. In particular the information should ensure the waste is accepted and managed in accordance with the conditions of a Waste Management Licence, PPC permit or within the terms of any relevant exemption.

Using this guidance

7. This guidance provides information on how to interpret the List of Wastes (LOW) and gives some examples of its application. However from time to time we may produce specific guidance for particular waste streams or industry sectors. For the application of the LOW to hazardous waste you should refer to the Agency document entitled "Interpretation of the Definition and Classification of Hazardous Waste WM2" and the brief guide 'What is a hazardous waste'. All guidance documents are available from the Environment Agency web site <http://www.environment-agency.gov.uk/>.

We have also included a waste thesaurus - an alphabetical list of over 1300 descriptions of wastes matched with the appropriate code(s). This can be used to help find the appropriate code(s) for waste. **However, the thesaurus is an aid to coding waste and**

¹ The Environmental Protection (Duty of Care) Regulations 1991 as amended by regulation 19 of the Landfill (England and Wales) Regulations 2002

should not be used in isolation from the procedure set out within the LOW (see paragraph 15).

Navigating around the List of Wastes

9. The LOW is divided into twenty chapters, many of which are industry-based but some are based on materials and processes. Each of these has a two-digit chapter code from 01 to 20. Each chapter has one or more sub-chapters. These are identified by four digit codes, the first two digits of which are the chapter code. Within these sub-chapters there are codes for individual waste streams, each of which is assigned a six-digit code.

03 WASTES FROM WOOD PROCESSING AND THE PRODUCTION OF PANELS AND FURNITURE, PULP, PAPER AND CARDBOARD	
03 01 wastes from wood processing and the production of panels and furniture	
03 01 01	waste bark and cork
03 01 04*	sawdust, shavings, cuttings, wood, particle board and veneer containing dangerous substances
03 01 05	sawdust, shavings, cuttings, wood, particle board and veneer other than those mentioned in 03 01 04
03 01 99	wastes not otherwise specified
03 02 wastes from wood preservation	
03 02 01*	non-halogenated organic wood preservatives
03 02 02*	organochlorinated wood preservatives
03 02 03*	organometallic wood preservatives
03 02 04*	inorganic wood preservatives
03 02 05*	other wood preservatives containing dangerous substances
03 02 99	wood preservatives not otherwise specified

Figure 1: Extract from Chapter 3 of the List of Wastes

10. In the LOW, for Chapter 03 there are 4 sub-chapters, 2 of these have been reproduced in Figure 1 above to show the individual six-digit codes and waste descriptions.
11. All waste streams must be given a six digit code, rather than a two or four digit code. Hazardous wastes also have an asterisk (e.g. 03 01 04*, 03 02 01*), which should be used whenever hazardous waste codes are recorded. There are two types of hazardous waste entries in the List of Wastes:
- mirror** entries – used where the waste description contains a reference to dangerous substances. This may be a general reference to ‘dangerous substances’ e.g. ‘03 02 05* - other wood preservatives containing **dangerous substances**’, or a specific reference to one particular dangerous substance, e.g. ‘17 06 01* - insulation materials containing **asbestos**’. These entries are **mirrored** with a corresponding non-hazardous six-digit code for those wastes which do not contain dangerous substances. The six-digit code with the asterisk is only appropriate if the waste contains dangerous substances, or the specific dangerous substance at or above the appropriate threshold;
 - absolute** entries - so called because they are always hazardous regardless of the composition of substances in the waste, e.g. 03 02 04* inorganic wood preservatives. There is no reference to dangerous substances in the waste description.

12. For more guidance on 'absolute' and 'mirror' hazardous waste codes, please refer to the Agency document "Interpretation of the Definition and Classification of Hazardous Waste WM2", available from the Agency's web site, www.environment-agency.gov.uk.

Finding the most appropriate code for a waste;

13. Before attempting to find an appropriate LOW code, you need to know the following important details about the waste:

- the type of business location that produced the waste (e.g. pharmaceutical manufacture);
- how the waste arose, i.e. the process/activity that produced it (emptying kegs of inert filler for tablet manufacture - see also para.19);
- a full description of the waste (e.g empty cardboard kegs);
- what the constituents of the waste are (80 percent cardboard, 15 percent steel, 5 percent polythene);
- the concentration of any dangerous substances and descriptions of the risks (risk phrases) associated with these substances; and
- the hazards that are associated with the waste.

You will find more guidance on the last two points in our guidance on the classification of hazardous waste, WM2, detailed above.

14. Although the List of Wastes contains two, four and six figure codes, only six figure codes must be used to code waste. However, the chapter and the sub-chapter headings are as important as the description alongside the six-figure code. For example, in Figure 1, the '03 01 01 – waste bark and cork' should only be used for waste bark and cork originating from wood processing or the production of panels and furniture. It should **not** be used for waste bark arising from any other activity, e.g. forestry or park maintenance. This is the case even though there is no specific reference to bark outside Chapter 03 of the catalogue.

15. The LOW provides that the following general steps must be taken to identify the correct code for a waste from the list. A flow chart setting out this procedure is given in Figure 2.

Step 1 Try to identify where in chapters 01 to 12 or 17 to 20 the waste is produced (i.e. the industry or process from which the waste arose, including household or similar waste). Using the information outlined in the bullet points above, identify the appropriate six-digit code for the waste, excluding codes ending with 99.

Step 2 If an appropriate waste code cannot be found in chapters 01 to 12 or 17 to 20, then the next step is to examine chapters 13, 14 and 15.

Step 3 If none of these waste codes properly describes the waste, try to identify whether the waste is described in chapter 16.

Step 4 If a suitable code still cannot be found, choose a 99 code from the appropriate chapter in Step 1.

- '99' codes cover too wide a range of wastes to be used to describe wastes unambiguously. Therefore, before using a LOW code ending in '99', please read the guidance given below in paragraph 17.

Notes

Look at chapters 1-12 to see if your business sector is described there. If it is, look for the right sub-chapter(s) and the correct codes within it. Even if your business is aptly described, the best descriptions for some waste you produce may be found elsewhere in the List. Note that chapter 06 – 08 includes many wastes from the supply and use of chemicals and coatings in addition to wastes from their production. Even though your business sector may be described in these chapters, you should not expect to find every waste that they produce listed in their relevant sub chapter of chapters 01 – 12. General wastes and materials not specifically associated with a single process appear elsewhere in the catalogue. Chapter 17 lists construction and demolition wastes and is applicable to all business sectors. Chapters 18 and 19 cover wastes produced from healthcare, waste management and water treatment activities. Chapter 20 lists municipal wastes but some of the codes can also be used by any business sector if a similar material does not appear in their own specific sub-chapter of chapters 01 – 12 or within chapters 13-15.

Chapter 13 lists oil and fuel waste. For non-municipal arisings of waste oil, this chapter should be referred to before using LOW code 201026*. Chapter 14 lists solvents, refrigerants and propellants. However, chapter 07 should be reviewed first for solvents arising from chemical production, formulation, supply or use. Chapter 08 should be referred to for solvents arising in paints and adhesives. Chapter 14 is the preferred chapter for all other, non-municipal, arisings of solvents. Chapter 15 lists packaging, filters, absorbents and protective clothing. All packaging should be recorded under chapter 15, irrespective of the sector from which it arose. Chapter 15 also includes codes for absorbents, contaminated wiping cloths and protective clothing. These wastes could arise from any business sector.

Chapter 16 lists a number of miscellaneous wastes, including sub-chapters for end-of-life vehicles, waste electrical equipment, batteries, transport tank washings, explosives, catalysts, oxidants, lab chemicals and gases, refractories and unused or off specification chemicals.

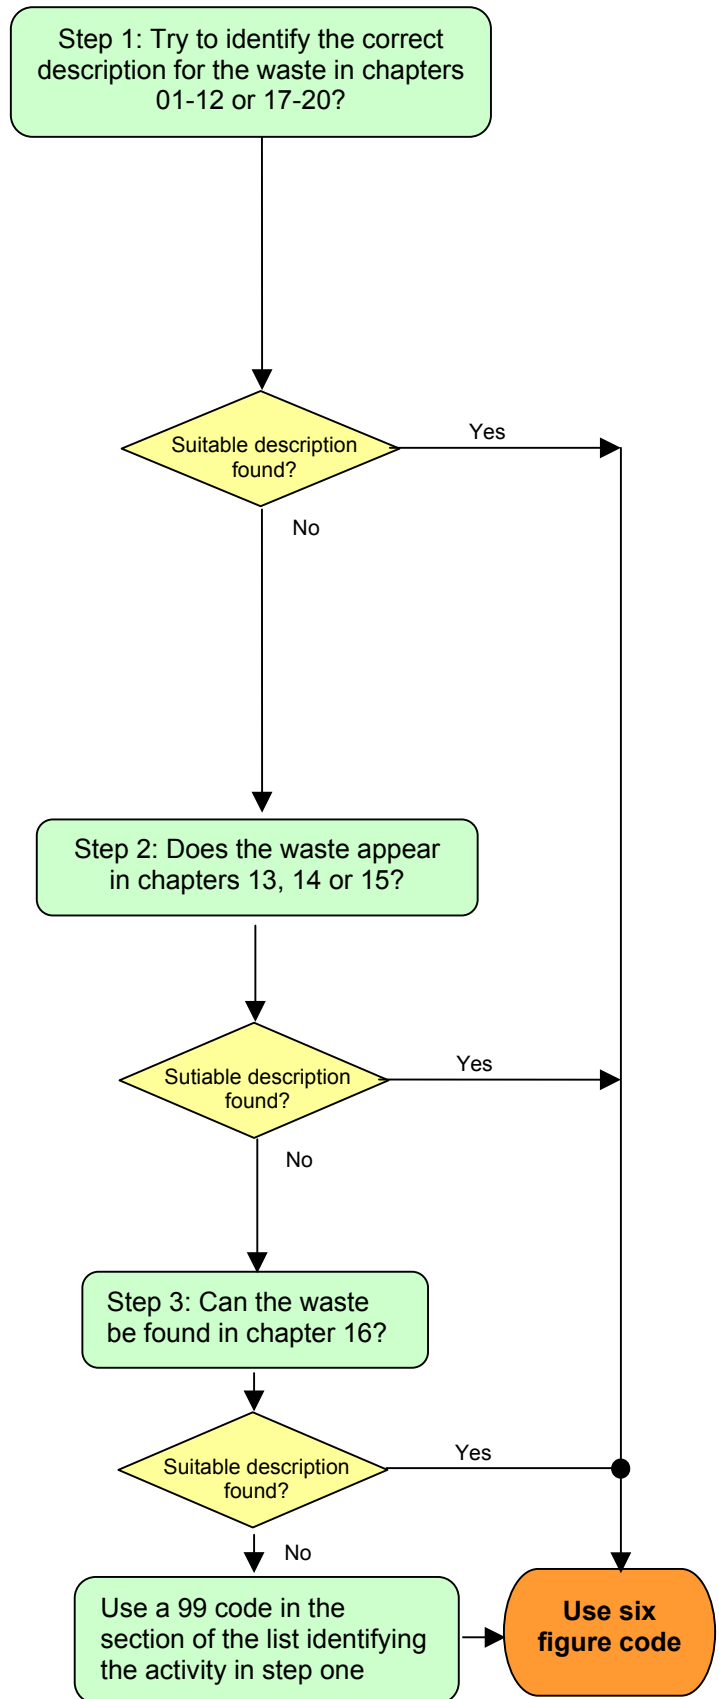

Figure 2: Flow chart for coding waste

The use of “not otherwise specified” codes

17. The List of Wastes contains many ‘codes ending in 99’ which are described as ‘not otherwise specified’. ‘99’ codes must only be used where no other suitable six-digit code can be found in the LOW after following the instructions for hierarchical use of the chapter groups in the list and to determine which ‘99’ code is appropriate (see the steps in paragraph 9). The use of LOW codes ending in ‘99’ on DoC transfer notes is lawful, but the note must also contain a detailed description of the waste to meet the requirements of the Duty of Care.
18. The use of ‘not otherwise specified’ codes has the following implications:
- Member States must report wastes that are not specified in the LOW to the European Commission. If you use a ‘99’ code, then we may ask you to provide further details of the waste (see paragraph 13) to help meet these reporting requirements; and
 - we will not include specific LOW codes ending in ‘99’ in any future permits/licences for waste management facilities in England and Wales, without the use of further qualifying descriptions, to prevent any potential pollution of the environment or harm to human health arising from the receipt of unspecified wastes.

Wastes from multi-process industries (e.g. car manufacture)

19. Although the List is partly based on the type of business, we recognise that some organisations will have to use codes from several chapters to code the wastes they produce. For example, wastes from car manufacturing may be listed in Chapters 12 (wastes from shaping and surface treatment of metals), 11 (inorganic wastes containing metals from metal treatment and the coating of metals) and 08 (wastes from the use of coatings), depending on the process/activity that produced the waste.

Municipal, mixed or general waste, including packaging

20. This guidance does not set out what is or is not municipal waste for the purposes of the landfill allowance schemes under the Waste and Emissions Trading Act 2003², only how to code it correctly and consistently.
21. You should always use the code whose description, taken together with the chapter and sub-chapter and following the procedure set out in the Regulations, most accurately reflects the nature of the waste. Municipal wastes are generally covered by Chapter 20: waste from households and similar wastes from commerce, industry and institutions. They contain a wide variety of components that may be separated for collection or on delivery to a civic amenity site or household waste recycling centre.
22. There are many codes in Chapter 20 for the different types of municipal waste that reflect the nature of that waste type. However, for some components of municipal waste this may mean using a code that is not in Chapter 20. For example, where waste from a householder is from construction and demolition, for example, mixed brick and concrete then the most apt description is given by 17 01 07 – “Mixtures of concrete, bricks, tiles and ceramics (not containing dangerous substances). This code should be used for

² Guidance on the interpretation of municipal waste in respect of Landfill Allowance Trading was published by Defra in September 2005 and should be used to determine if waste is municipal or not in respect of the landfill allowance schemes.

waste of this type rather than 20 02 02 – Soil and stones or 20 02 03 – Other non-biodegradable waste.

23. Separately collected packaging waste (including mixtures of different packaging materials) must be classified in sub-chapter 15 01. Therefore for municipal waste separated glass bottles and jars, the correct code is 15 01 07 “Glass” rather than 20 01 02 “Glass”. This is because the sub-chapter description for 15 01 reads “packaging (including separately collected municipal packaging waste)” and for 20 01, the relevant sub-chapter description is “separately collected fractions (except 15 01)”.
24. A list of some municipal wastes under their common, everyday names is given in Annex 2 to this document. These codes should be used wherever they are appropriate.
25. In many cases, apart from separate collections of hazardous waste, a single container will be used for all the non-hazardous waste produced at a location. This mixed waste is often termed “solid, non-hazardous waste” or “general industrial waste or “general commercial waste”.
26. The List of Wastes contains only one code for general, mixed waste. This code, ‘20 03 01 – mixed municipal waste’, can be used for waste from household, commercial or industrial premises. Although the use of this code is acceptable in the correct circumstances, the Duty of Care requires that any transfer of waste is accompanied by a written description. This written description should give as much detail as possible of the components of the mixed waste.
27. For example: ‘20 03 01 – mixed municipal waste’ arising from a light industrial unit should have an accompanying written description which might read:

‘General non-hazardous waste from light engineering consisting only of waste food from the canteen, paper, metal, cardboard & plastic packaging and floor sweepings’

28. It is the responsibility of waste producers to ensure their wastes are accurately and fully described on any transfer notes. Waste producers should also periodically carry out an audit of their waste streams in accordance with general guidance on the DoC.

Hazardous materials in general waste

29. The Hazardous Waste Regulations 2005 generally prohibit the mixing of hazardous with non-hazardous waste, with a different category of hazardous waste or with any other substance or material. Such mixing is only allowed if it is part of a recovery process and it is authorised by, and carried out in accordance with the requirements of, a waste management licence, permit or a registered exemption. Even so, hazardous wastes should not be mixed with non-hazardous wastes where it can be avoided.
30. The prohibition on mixing applies to producers of the waste and anyone involved in the transfer and disposal/recovery of the waste.

31. Although mixed municipal waste is not regarded as hazardous ('20 03 01 *mixed municipal waste*' is not marked with an asterisk), it is recognised that some minor quantities of hazardous waste may arise within it. In these cases it is accepted that these incidental arisings of hazardous waste will not be sufficient to alter the classification of the mixed municipal waste.
32. However, this non-hazardous classification **will not apply** where hazardous waste has been deliberately mixed with non-hazardous waste in order to dispose of the hazardous waste as non-hazardous waste.
33. Household waste is made up from a wide variety of different components, some of which may be hazardous. For commercial or industrial waste to be considered as mixed municipal waste it should be similar to wastes from households in both composition and quantity. For example, household waste may contain small quantities of nail varnish, which contains a hazardous solvent. Waste from industrial or commercial premises that contain a similar solvent but in much greater quantities means that the waste cannot be considered mixed municipal waste.
34. Where waste contains fluorescent tubes in such numbers that it is different in either composition or quantity from waste from households, the code 20 03 01 cannot be applied. Where fluorescent tubes are collected in bulk as part of maintenance activity the LOW code for this is 20 01 21* - *fluorescent tubes and other mercury containing waste*. This 6-digit code is marked with an asterisk as this waste is hazardous.

Classification where hazardous waste is mixed with municipal waste at a civic amenity site.

35. At a civic amenity site (household waste/recycling centre) where separate facilities for hazardous household waste are not provided, the public should be encouraged to take hazardous items to other sites with appropriate facilities whenever possible.
36. However, if small quantities of hazardous household waste are brought in by the public and mixed with non-hazardous waste, the waste will remain as mixed municipal waste and should be coded as 20 03 01. Where the amount of hazardous waste added is such that the description is no longer accurate, then the whole waste should be regarded and coded as hazardous, unless, or until the hazardous component(s) are separated from the non-hazardous waste. The hazardous component(s) must be coded separately in addition to the classification for the non-hazardous waste.

Collection of several wastes on the same load, the use of multi-lift vehicles and carriers rounds

Multiple wastes on the same load

37. Where different types of waste are transported together and are either in separate containers (e.g. drums, or separate compartments on a vehicle) or are self-contained units (e.g. car batteries) then each different type of waste should be allocated its own LOW code. This code should be recorded on the accompanying transfer note (or list forming part of the transfer note) together with the appropriate detailed written descriptions.

38. At the waste management facility, where the waste is transferred to another person or company, the transfer note for this exchange should detail the same LOW codes and descriptions as when the waste was collected.

Multi-lift vehicles (e.g. front-end loaders and rear-end loaders)

39. For multi-lift vehicles and single compartment tankers a transfer note will have to be drawn up for each waste producer. These notes should properly describe each load emptied into the vehicle and contain the relevant LOW codes. Though the wastes may have many similarities and will often have the same or a related LOW code, any differences in the contents of the individual containers, should be recorded in the individual written descriptions. Hazardous and non-hazardous waste and different categories of hazardous wastes cannot be mixed together during collection or transport.
40. At the waste management facility, the waste is transferred to another person or company and the transfer note should provide a description of the waste(s) and the appropriate LOW code(s). If the waste is completely mixed a single LOW code can be used. If the different wastes on the collection vehicle can be deposited separately, then the LOW codes for each of these should be listed on the transfer note. In all cases the written description accompanying the transfer note should provide sufficient details of all the wastes which form part of the multiple collection.

Carriers' and other collection rounds

41. Specialist waste services such as those collecting feminine hygiene wastes and/or clinical wastes also pick up wastes from several producers but in this case the collected wastes may be of several different types. Whereas non-hazardous wastes of the same (or similar) type from different producers can be mixed together, different types of waste should be kept separate during transport and delivery.
42. The transfer note should provide a LOW code for each different type of waste delivered to the waste management facility. Where wastes from different producers are mixed together in the same load and subsequently segregated at the waste management facility a separate LOW code should be assigned to each type of waste.

Waste from waste management facilities

43. Many wastes are delivered to waste management facilities for transfer or treatment prior to their final disposal or recovery. Wastes that are not subject to any treatment that changes the essential physical or chemical properties of the waste, apart from compaction retain the same LOW codes and descriptions as when the waste was originally collected. This applies to mixed wastes where some components are separated at a facility but the amount is not sufficient to change the nature of the waste and it is still most accurately described by the original description.
44. Where waste is treated at an authorised waste management facility such as an incinerator or mechanical biological treatment plant then the waste, on leaving the facility, should be coded under an appropriate sub-chapter of chapter 19. The chapter 19 sub-chapters have no relation to other treatment classifications used outside of the LOW.

45. The following wastes and waste treatment activities are covered in chapter 19:

- incineration or pyrolysis;
- physico/chemical treatment;
- aerobic treatment;
- anaerobic treatment;
- metal shredding (fragmentising);
- oil regeneration;
- mechanical treatment;
- soil and groundwater remediation;
- stabilised/solidified/vitrified waste; and
- landfill leachate.

46. Wastes that are treated at the point of production (unless it is an authorised waste management facility) should not use codes from chapter 19 of the LOW. The appropriate code is determined using the hierarchy of the LOW as provided in paragraph 15.

47. Several waste descriptions in chapter 19 are very broad in nature e.g. *19 02 03 premixed wastes composed only of non-hazardous wastes*. In such cases, the written description that accompanies the transfer note should also include a description of the waste prior to treatment and give brief details of the treatment carried out. However, this is not necessary where the originating waste is unambiguously described in the chapter and subchapter headings, e.g. *19 01 02 – ferrous materials removed from bottom ash*.

Treated waste

48. Some wastes will have to be treated prior to landfill³. Wastes that are coded under chapter 19 of the LOW will have been subject to some treatment but this will not automatically signify that they have fully met with any treatment (or pre-treatment) requirements or that they comply with the waste acceptance criteria. This will depend on the facts in each case. Further guidance on waste destined for landfill is available from the Environment Agency website (<http://www.environment-agency.gov.uk/>).

Healthcare and clinical wastes

49. Healthcare wastes are listed under chapter 18 of the LOW. Clinical waste is not a category in the LOW but it is defined by the Controlled Waste Regulations 1992 as likely to pose a risk of infection or physical injury. Therefore, most healthcare wastes will not be clinical wastes.

If the waste requires specialist treatment or disposal (including heat treatment or incineration) due to the infection risk posed it should be considered Hazardous Infectious Waste and coded as *18 01 03** - *wastes whose collection and disposal is subject to special requirements in order to prevent infection*.

³ This is required by regulation 10 of the Landfill (England & Wales) Regulations 2002

51. Animal carcasses arising from veterinary activity are a healthcare waste. Those that pose no infection risk, and are therefore not clinical waste, should be listed as *18 02 03 - wastes whose collection and disposal is not subject to special requirements in order to prevent infection*. Those that are a clinical waste, due to a risk of infection, should be listed as *18 02 02** - *wastes whose collection and disposal is subject to special requirements in order to prevent infection*.
52. Animal and human hygiene wastes that arise from activities that are not related to healthcare should not be coded using chapter 18, for example:
- (i) non-clinical, municipal wastes, such as feminine hygiene waste from shops and offices and dog faeces from collection bins, should be coded using *20 01 99 – other fractions not otherwise specified* but should be described fully e.g. feminine hygiene waste not from healthcare not subject to special requirements in order to prevent infection; and
 - (ii) sharps waste arising from non-healthcare activities, such as tattooing, cosmetic ear or body piercing and from substance abuse (where not arising from healthcare) should also be coded 20 01 99. Other sharps such as those that have been used by diabetics are a healthcare waste and should be coded under chapter 18.
53. Note that where healthcare waste is also classified as a clinical waste, the waste must be rendered safe. These issues should be considered in conjunction with the Duty of Care code of practice when describing and disposing of the waste.

Different wastes types that could be described by the same code.

54. The List of Wastes contains several descriptions that are very broad in nature and not sufficient to allow those subsequently handling it to manage it appropriately.
55. The following are some **examples** of codes where different wastes that are properly coded could have such different properties that some of the wastes may be acceptable at a particular site while other with the same code may not.

01 03 Wastes from further physical and chemical processing of metalliferous minerals

- 01 03 06 Tailings other than those mentioned in 01 03 04 & 01 03 05
- 01 03 08 Dusty and powdery waste other than those mentioned in 01 03 07

01 04 Wastes from further physical and chemical processing on non-metalliferous minerals

- 01 04 10 Dusty and powdery waste other than those mentioned in 01 04 07
- 01 04 11 Waste from potash and rock-salt processing other than those mentioned in 01 04 07

02 03 Wastes from fruit, vegetables, cereals, edible oils, cocoa, coffee and tobacco preparation and processing; tobacco processing; conserve production

- 02 03.03 Waste from solvent extraction
- 02 03 04 Materials unsuitable for consumption or processing

02 07 Wastes from the production of alcoholic and non-alcoholic beverages (except coffee, tea and cocoa)

- 02 07 03 Waste from chemical treatment
- 02 07 04 Materials unsuitable for consumption or processing

03.03 Wastes from pulp, paper and cardboard production and processing

- 03 03 05 De-inking sludges from paper recycling
- 03 03 07 Rejects from paper and cardboard recycling

06 04 Metal-containing wastes

- 06 04 05* Waste containing other heavy metals

16 03 Off-specification batches

16 03 03* Inorganic waste containing dangerous substances

16 03 04 Inorganic waste other than those mentioned in 16 03 03

56. There are many other LOW codes which could be used for wastes that are significantly different from one another.
57. The Duty of Care requires waste to be described in a way that permits its safe handling and management. Therefore, where the description associated with an EWC code provides an adequate description, which meets fully the requirements of the DoC, it can be used, e.g. *15 01 02 – Plastic Packaging* or *17 02 02 – Glass*.
58. Where there is doubt more information about the waste will need to be provided and in addition to the LOW code, the waste should be properly described in a way that identifies any components and properties relevant to its handling and subsequent management.

Use of List of Wastes (LOW) codes in permitting and licensing

59. The need for more precise descriptions than are given in the List of Wastes also affects applications for permits and licences. The Environment Agency uses LOW codes in permits and licences to define wastes that are environmentally acceptable at a particular facility. However, the LOW does not have a material-based structure and a single LOW code may cover a range of wastes with different chemical and physical properties. For these reasons the use of LOW codes alone in licences and permits may not properly reflect the risk to the environment.
60. Where LOW codes covering a range of wastes with differing environmental impacts are included as part of a licence or permit application, further information qualifying the substances within it or properties of the waste will be required. In making an application for a licence or permit, applicants must consider the risks posed by their proposed facility. Part of this assessment will include consideration of the substances in the waste the site will accept, their different properties and the interactions and impacts they may have. As a result of this work, applicants should be in a position to provide a more detailed description of the materials that they are proposing to accept and should include this description along with the appropriate LOW codes in their application.
61. The European Commission's statistical advisors, Eurostat, have produced a grouping of LOW codes for use in reporting to European Commission. The codes for waste with broadly similar properties are grouped together. These groupings will help identify LOW codes for wastes with similar environmental properties. They have been incorporated into a tool on the CD-ROM regulatory application package and will be used in permits or waste management licences, so that all types of waste with a similar environmental impact are found together.

Waste site input/output returns

62. Most waste management licences and PPC waste permits issued in England & Wales contain a condition requiring the licence holder to provide data on the types and quantities of waste accepted or produced on a quarterly or annual basis.

63. The Environment Agency now asks all licence holders to use LOW codes for site input returns.
64. In addition to any requirements under a waste management licence or permit the Landfill Allowances and Trading Scheme (England) Regulations 2004 require landfill operators landfilling municipal waste to keep records and make returns to the Agency concerning the quantities of municipal waste disposed of. Most household waste would be correctly described as *20 03 01 - mixed municipal waste*, however there are many more appropriate LOW codes that may need to be applied for different types of municipal waste (see paragraphs 20 to 28 above). The Environment Agency's view is that the LOW code that most accurately reflects the nature of the waste must be used. Any pre-treatment of waste prior to landfill may well change the nature of the waste to such an extent that it would be more appropriately described by a different code (see paragraphs 43 to 48). We intend to produce further guidance in 2006 for landfill operators on making returns under the above regulations.
65. Under the Hazardous Waste Regulations, any facility that receives hazardous waste (consignees) is required to submit a return every quarter that summarises all of the hazardous waste received. This also includes facilities that dispose of waste that they have produced themselves by depositing on-site. Guidance on consignee returns can be found on our website at <http://www.environment-agency.gov.uk/>.

About the waste thesaurus

66. To help identify the correct LOW codes and to aid consistency, the Agency has drafted a waste thesaurus (Annex 1).
67. The thesaurus consists of an alphabetical list of common waste descriptions and parallel extracts from the List of Waste, arranged by chapter and subchapter. You can look up everyday waste descriptions which we have derived from various sources, including permitting and our waste survey, and match these with LOW codes. The alphabetical list is given in Part A of Annex 1. Part B shows the same information but in the same order as the List of Wastes.
68. The best way to use the thesaurus is first to look up in the alphabetical list one or more of the common descriptions of your waste. Then, when you have found a matching description, check the code in the numerical listing of the thesaurus, paying particular attention to the chapter and sub-chapter headings.
69. The thesaurus can be used as an aid to identifying the most appropriate LOW code for a particular waste but it is not a complete list and should not be relied upon as the sole means of coding. The correct code will depend on the precise origin and nature of the waste and should be determined using the steps set out in paragraph 15, referring to the full List of Wastes.

Further information and assistance

70. Annex 3 lists organisations who may give additional information and advice on coding your waste.

Your help in updating this guidance

71. This is a living document and we intend to update it and the thesaurus from time to time. If you have any suggestions for improvements to the guidance or for new waste descriptions and their corresponding LOW codes, please let us know by e-mail to waste.enquiries@environment-agency.gov.uk.

Annex 3 – Further information and assistance

Further information and assistance may be obtained from the following:

Your current waste management service provider, who may be able to advise in some instances.

The Environmental Services Association - ESA has members providing waste management and waste related services to businesses in both the public and private sectors. Contact www.esauk.org/directory/index.asp for their database of member companies. This directory allows you to search the database by company name, waste management service or county.

Envirowise – We recommend that all businesses review their waste management practices to consider the amount and hazardousness of the waste produced and identify opportunities to recover value through waste minimisation or recycling. The Government's Envirowise Programme offers small businesses a free and confidential "fastrack" waste minimisation audit to get you started. Envirowise advisors can help on a range of environmental issues, including hazardous waste. Its Environment and Energy helpline is Freephone 0800 585794 or via the website <http://www.envirowise.gov.uk/>

Netregs.gov.uk - Clear regulatory and good practice advice on environmental issues for small businesses, tailored for their industry sector, can be found at <http://www.environment-agency.gov.uk/netregs>

Information on **industrial waste minimisation** aimed at electronics and battery manufacture, tool processing, metals and metal finishing construction, minerals and inorganics can be found at <http://www.resource-efficiency.org/>

WM2 Technical Guidance on the definition and classification of hazardous waste (WM2) can be found on the Environment Agency's website <http://www.environment-agency.gov.uk/wm2>

Letsrecycle.com – this is an independent news web site for business and a good source of information relating to changes in legislation. It also includes a searchable database of Waste Management Companies throughout the UK.

The **Chartered Institution of Wastes Management** (CIWM) – the professional body for waste managers offers simple "waste explained" advice and links to sources of support and information: www.ciwm.co.uk. The Institution is also the main waste skills training body offering courses on hazardous waste and a "hands-on operative" Waste Awareness Certificate amongst a much larger training programme.
